

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Ranunculus multifidus, Pursh, growing in abundance. It is in a small pond to the west of the main drive, and a short distance south of the late residence of Mr. Litchfield.

Nasturtium Sylvestre, R. Br., grows on the border of the same pond in great luxuriance, and there is enough for all the herbariums in the country.

Arethusa bulbosa, L., can be found in the marshes of New Lots, about a mile south-east from East New York.

Pogonia verticillata, Nutt., was brought to me by Mr. G. B. Brainerd, also from New Lots, but gathered in the woods a little south-east from the Ridgewood engine-house.

Archemora rigida, DC., I observe was not reported in the Bulletin, from Long Island. It grows from Babylon along the south shore of the Island to Canarsie.

Can you tell me where I can find in this vicinity *Acer macrophyllum*, or *A. circinatum*? *A. campestre*, the only maple indigenous to England, I was very glad lately to find in Central Park.

A friend tells me that on a recent R. R. trip in Massachusetts, he saw the boys enter the cars with bunches of *Arethusa bulbosa* for sale at 10 cents a bunch.

J. S. M., 327, Clermont Ave., Brooklyn, June 13.

37. Notes by M. Ruger.—*Geranium pusillum*, L., Maspeth, on Cooper Ave., south of the old Flushing Rail Road; and Locust Ave., near South Side R. R.

Sedum ternatum, Mchx., grassy bank near West Flushing.

Chenopodium glaucum, L., grows in Flatbush, along East New York Ave. At the entrance to the "piggery," opposite the rear of Flatbush Hospital, it grows in abundance.

38. Notes by Rev. S. Lockwood.—Last June, I discovered and gathered fine specimens of *Melonas bullata*, L., near Freehold, N. J.; also in October, 1869, I found and collected beautiful specimens in fruit of the Climbing Fern, *Lygodium palmatum*, Swartz. These last were not very far from Keyport, N. J. S. L., Freehold, N. J., June 5th.

39. Notes by I. Coles.—I collected a specimen of *Viola pedata*, Var. *alba*, in Suffolk Co., this spring. The variety with two dark purple petals and yellowish eye or centre grows quite plentifully some six miles south of this place. I also found, this spring, for the first time, the *Trillium erectum*, L., in a swamp about three miles east of Glen Cove I. C., Glen Cove, June 12th.

40. Notes by I. H. Hall.—*Plantago Virginica*, L., I have found in some considerable quantity at Weehawken; also some at High Bridge in Westchester County; also at East Chester, and in Connecticut. *Lysimachia thyrsiflora*, L., in fresh water at, or near Hall's Corners, between Tarrytown and White Plains, and I have an indistinct impression that I found it elsewhere in the vicinity. Also at South Norwalk, Connecticut. (It is common enough in Central N. Y.) *Anagallis arvensis*, L., I have found very common in East Chester and on Throg's Neck, and places near; and quite as often by the dusty roadside as anywhere else. It grows in such places frequently from New York as far East as I have been, and also as far along New
